

BUGATTI PRESENTS 16 C GALIBIER CONCEPT IN DUBAI

What was revealed as the climax of its centenary celebration ceremonies in September at Bugatti's headquarters in Molsheim, has been presented to customers and opinion-makers at Dubai today: the Bugatti 16 C Galibier concept - planned to be the most exclusive, elegant, and powerful four door automobile in the world. At the prestigious Park Hyatt Hotel in the Dubai Creek Golf and Yacht Club Bugatti's Director of Sales, Marketing and Customer Service, Alasdair Stewart, emphasised that the Galibier is one of several concept studies which the company is considering for the future of the Bugatti marque.

Arte - Forme - Technique: those are the brand values to which Ettore Bugatti and his son Jean oriented themselves in order to develop even more powerful engines and even more noble body designs for each new model, which were without equal in quality, handling, speed and elegance. In the process, they experimented with new materials again and again without compromise; thus was Bugatti one of the first manufacturers to use aluminium parts for bodies, engine blocks and wheels.

Arte - Forme - Technique are also the brand values to which the design and engineering team of Bugatti Automobiles S.A.S. oriented themselves in the development of the Galibier. With this new four-door concept car, Bugatti assumes anew a leading role in the use of new material combinations. Thus the body is constructed of handmade carbon fibre parts coloured dark blue so that, when illuminated, the woven structure shimmers through strikingly. Carbon fibre not only possesses unusually great rigidity but is also especially light. The wings and doors made of polished aluminium.

The Galibier's design masters the challenge of uniting sportiness with the comfort and elegance of a modern four-door saloon. The basic architecture picks up on the torpedo-like character of the Type 35, which was already revived in the Veyron, and reinterprets it. With the typical Bugatti radiator grille, round unusual LED headlights and the clamshell running the length of the vehicle which became synonymous with the brand identity under Jean Bugatti in the Type 57, this car transports the Bugatti genes into the modern world.

Beneath the bonnet, which folds back from both sides, there resides a 16-cylinder, 8-litre, two-stage supercharged engine. What makes this engine special is that it was developed as a flex-fuel engine and can optional be run on ethanol. Four-wheel drive, specially developed ceramic brakes and a new suspension design enable the agile, always-sure handling of a saloon of this size.

The interior reflects the elemental design of the exterior. The dash panel has been reduced to the essential; two centrally located main instruments keep even the rear passengers constantly informed of the actual speed and previous performance. Parmigiani, the Swiss maker of fine watches, created a removable tourbillon clock for the Galibier, which may be worn on the wrist thanks to a cleverly designed leather strap.

"Galibier" is not just the name of one of the most difficult alpine passes along the Tour de France but, in its time, was a version of the four door Type 57 unequalled in sportiness and elegance.
