

BUGATTI VEYRON 16.4 GRAND SPORT VITESSE PREMIERES IN ASIA

The Bugatti brand has originally been founded in 1909 by the educated artist and engineer Ettore Bugatti. His cars were well known for the beauty of their designs, their lightness and advanced technology. In the 1920s and 30s they won more races than any of their competitors. Closed down in 1957 the company was bought and revived by the Volkswagen Group in 1998. The first Bugatti Veyron 16.4 was produced in 2005, the final of the series, limited to 300 units was sold in June 2011. At the moment the brand offers the 1,001 hp roadster Grand Sport and its stronger brother the 1,200 hp roadster Vitesse limited to 150 units combined, of which so far 69 have been ordered.

DYNAMICS IN FIGURES.

The new Bugatti Veyron 16.4 Grand Sport Vitesse boasts a remarkable maximum torque of 1,500 Nm (at 3000—5000 rpm) from the 7.9-litre capacity of its W16 engine. The maximum output (1,200 hp) is reached at 6,400 rpm. These figures allow the car to reach 100 km/h (62 mph) from standing in an unbelievable 2.6 seconds. The top speed of 410 km/h (255 mph) makes the four-wheel drive (like all Veyron) Grand Sport Vitesse the fastest production roadster ever.

DRIVE SYSTEM.

The 199 hp increase over the Grand Sport has been mainly achieved by using four larger turbochargers with new intercoolers. Furthermore, Bugatti has extensively reinforced all drivetrain components in order to safely transfer the immense force the Vitesse is capable of. As a consequence of the larger turbochargers and the overall reduced back pressure, it was even possible to reduce the fuel consumption slightly, even with the increased power output.

CHASSIS.

In order to put the unrivalled power on the road safely and masterfully, the engineers have reconfigured the chassis of the Vitesse. Thanks to the quick-responding dampers that have been adapted from motor racing, the control of the vehicle has been further improved and balanced perfectly. In addition to the incomparable lateral acceleration that is able to go up to 1.4 g, the precise interaction of the tires (on all-new, lighter 20-inch “Vitesse”-type alloy wheels), together with the intelligent all-wheel-drive system, ensures stable handling. Since the reconfigured ESP kicks in slightly later, for example when you accelerate around corners, the Grand Sport Vitesse also provides a more dynamic performance in these types of situations. It goes without saying that Bugatti adapted the brake-cooling system to account for the even higher engine output. The brakes, which are unparalleled in terms of stability and performance, now have additional and larger air intakes.

BODY.

Bugatti has developed a new roof spoiler for the Grand Sport Vitesse that significantly reduces wind noise and buffering in the interior. Furthermore, there will be a new windbreak for the roadster that can be stored away compactly in the luggage compartment when not in use. Both components will also be available for the Grand Sport. While in place, they allow for an extremely relaxed, open-top driving experience even at speeds around 200 km/h (124 mph).

Numerous aerodynamic measures that appeared on the Super Sport’s front and rear have been adapted for the Grand Sport Vitesse. The front end is therefore characterised by larger air intakes; the two central air intakes to the left and right of the Bugatti radiator grille are divided horizontally by a bar. The bottom air vent stretches sideways into the wheel housing providing this exceptional sports car an extremely masterful appearance. Immediately below the air intake, you will see a new, visually refined front spoiler that has been designed in a similar way to the splitters used in motor racing. The rear end, which is also derived from the Super Sport, is characterised by a double diffuser and a centrally positioned twin tailpipe.

INTERIOR

Carbon fibre is also the dominant material in the interior (along with stainless metals such as Aluminium and Magnesium) of the Grand Sport Vitesse. Numerous interior parts are now made from carbon fibre in the 1,200 hp roadster. This includes the center console extension, a cover with EB logo in the rear-bulkhead leather trim (between the seat backrests) and the belt outlet covers on the seats. The décor on the center console, the door inserts and the adjoining trim on the instrument panel are also made from carbon fibre. The bi-color black trim parts (for example, in the roof console) are also new in the Grand Sport version, as is a special seat design for the Grand Sport Vitesse.

CONFIGURATION OF THE SHOW VEHICLES.

There is no end to the individualization options for the Bugatti. Each one is therefore completely unique. This also applies to the other models that Bugatti is exhibiting at the 2012 Beijing International Motor Show. The Grand Sport Vitesse is painted in all black with red rims in a diamond pattern. Its carmine red interior and seats showcase an aggressive, dynamic look that fits well with the positioning of the new Grand Sport Vitesse. It will cost 1.79 million euros. The classic Grand Sport, a sports car with an elegant, artistic orientation, will, of course, remain in the range. This year in Beijing, Bugatti is presenting a special model to pay homage to the year of the dragon. The one off Grand Sport model "Wei Long 2012" was developed together with the Königliche Porzellan Manufaktur Berlin and has been fitted with dragon relief sculptures on finest porcelain both on the body and in the cabin endowing the car with deep Chinese cultural heritage. With highly elaborated dragon sculptures on the oil and fuel cap, its white polished exterior and carmine red interior the "Wei Long 2012" shines with elegance and nobility. The headrests are embroidered with the Chinese "Dragon" character, and the handcrafted 100% silk floor mats are embossed with Chinese "Dragon" character. Highlight is the exquisite center piece with a white porcelain dragon relief sculpture with every detail of a dragon's body so vividly craved and elaborated. These unique and artistic Chinese features together with the breath-taking speed of the Bugatti Grand Sport of more than 400 km/h make the "Wei Long 2012" the dragon of the automotive industry. This one off model will cost 1.58 million euros.
